

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

## THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE BOTANY IN RELATION TO AGRICULTURE<sup>1</sup>

It is the aim of this discussion not merely to show the relation of botany to agriculture, but also to point out on the one hand what botanical investigation has actually done for American agriculture, and on the other, how recent agricultural development has stimulated the science of botany along both educational and investigational lines.

Though much of its practical application passes under such titles as agronomy, horticulture, animal and dairy industry, and soil technology, scientific agriculture depends primarily upon the three fundamental sciences of chemistry, zoology and botany. Of these, botany should and does have the closest relationship with it. This is indicated by the fact that out of 5,500 persons concerned with agricultural teaching and investigation in the U. S. Department of Agriculture and the various agricultural colleges and stations, about 700, or 12 per cent., may be classified as botanists.

There are botanists, however, who are so engrossed in the pure science of their subject that they have little interest in its economic, or, what to-day is almost the same thing, its agricultural relation; on the other hand, there are those working on the practical side who do not appreciate how much the pure science of botany has aided them in their work. We have no quarrel

<sup>1</sup> Address of the vice-president and chairman of Section G, Botany, American Association for the Advancement of Science, Columbus, December, 1915.
